EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971=100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction data for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes: Manufacturing, 1956-1976, Catalogue 62-543 for the 1971=100 based indexes.

Petroleum Refineries Price Index

Indices des prix de vente dans l'industrie (1971=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueille des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: Industries manufacturières, 1956-1976, nº 62-543 au catalogue pour les indices basés sur l'année repère 1971=100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix

by oil companies for finely specified categories of sale. A listing of the components of the old and revised price samples is given in text table 1.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user category in the Petroleum Refinery Index (PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P^{Pub.}_{t/71} = P^{New}_{t/Jan.\ 77} \times P^{Old}_{Jan.\ 77/71}$$

where

$P^{Pub}_{t/71}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P^{New}_{t/Jan.\ 77}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P^{Old}_{Jan.\ 77/71}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus. Les composantes de l'ancien échantillon et de l'échantillon révisé des prix figurent dans le texte tableau 1.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P^{publ.}_{t/71} = P^{nouv.}_{t/janv.\ 77} \times P^{anc.}_{janv.\ 77/71}$$

où

$P^{publ.}_{t/71}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation des prix mesurée à partir du nouvel échantillon;

$P^{nouv.}_{t/janv.\ 77}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P^{anc.}_{janv.\ 77/71}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Thermal Coal Purchase Price Index (1971=100)

This index on a 1971=100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice du prix d'achat du charbon thermique (1971=100)

Cet indice de base 1971=100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat

determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, excluding federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspeyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{p_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

$\sum$ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the fixed weight of a particular item in the base year o,

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, sans les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspeyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{p_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

$\sum$ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération fixe d'un article particulier pendant l'année de base o,

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend

is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971=100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) an index for bills less than 5 000 kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$Pt/_o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

$Pt/_o$ = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence qui doit paraître bientôt (nº 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971=100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie garantie, non susceptible d'être interrompue fait l'objet du relevé, les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité du produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$Pt/_o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

$Pt/_o$ = indice pour l'année "t"

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année "o", année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5 000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5 000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW and over 20 000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5 000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15 000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Méthodologie

Factures de moins de 5 000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5 000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW et plus de 20 000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5 000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinement que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15 000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-hau Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977=100)

The Raw Materials Price Index is a base-weighted series covering the domestic disappearance of some 70 commodities originating in Canada or overseas. Price data, for the most part relating to unprocessed materials, are obtained from a variety of sources including existing Statistics Canada price indexes, other government departments, and trade publications as well as respondents. Where data does not exist for an unprocessed material a price is selected from the next highest stage of processing.

The weighting system is based on values calculated for the 1974 input/output tables, i.e., gross output plus imports, wholesale and transport margins minus exports. The 1974 values were subsequently adjusted for price change between that year and 1977 using appropriate series from the General Wholesale Price Index. Where individual quotations are used these are given equal weighting within a commodity series. Weights for the major groups are given below.

The formula used in the calculations is:

$$Ps = \frac{\sum \frac{pt}{p77} \times 100}{n}$$

$$Pm = \frac{\sum Ps \times V}{\sum V}$$

$$Pr = \frac{\sum Pm \times V}{\sum V}$$

where

p^t = current price of raw material

p^{77} = 1977 annual average price of raw material

Ps = commodity index

Indice des prix des matières brutes (1977=100)

L'indice des prix des matières brutes est un indice à pondération de base concernant la consommation intérieure de quelque 70 produits provenant du Canada ou de l'étranger. Les données sur les prix, la plupart se rapportant aux matières non transformées, ont été puisées dans diverses sources, notamment les indices de prix de Statistique Canada, les publications des ministères, les revues spécialisées et les enquêtés. Lorsqu'il n'existe aucune donnée sur une matière non transformée, le prix est établi à l'étape suivante de la transformation.

Le schéma de pondération est déterminé par les valeurs calculées dans les tableaux d'entrées-sorties de 1974, c'est-à-dire la production brute plus les importations, les marges des grossistes et celles des transporteurs, moins les exportations. Les valeurs de 1974 ont ensuite été corrigées pour tenir compte des variations de prix survenues entre 1974 et 1977, au moyen des séries appropriées de l'indice général des prix de gros. Chacun des prix particuliers pour un même produit reçoit une pondération égale. La pondération des groupes est donnée ci-après.

Voici la formule qui a servi aux calculs:

$$P_s = \frac{\sum \frac{pt}{p77} \times 100}{n}$$

$$P_m = \frac{\sum Ps \times V}{\sum V}$$

$$P_r = \frac{\sum Pm \times V}{\sum V}$$

où

p^t = le prix courant de la matière brute

p^{77} = le prix moyen de la matière brute en 1977

P_s = l'indice du produit

Pm = major group index

Pr = Raw Materials Price Index

V = Input/Output values in 1974 x $\frac{1977}{1974}$ GWI.

All important crude materials consumed in Canada are covered by this index without duplication. In some instances prices are volatile (non-ferrous metals) but others are controlled by marketing boards (milk), regulation (crude oil) or long-term contracts. At the total level the index should be an early indicator of price pressure of unprocessed goods flowing into Canadian manufacturing and distribution industries.

The following indexes are published monthly:

P_m = l'indice du groupe

P_r = indice des prix des matières brutes

V = valeurs des tableaux d'entrées-sorties de 1974 x IGPG $\frac{1977}{1974}$.

Cet indice prend en compte toutes les matières brutes importantes consommées au Canada, en évitant les doubles emplois. Certains prix fluctuent énormément (métaux non ferreux), alors que d'autres sont fixés par des offices de commercialisation (lait), des règlements (pétrole brut) ou des contrats à long terme. L'indice d'ensemble devrait être un indicateur avancé de l'évolution des prix des biens non transformés qu'utilisent les entreprises de fabrication et de distribution au Canada.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971=100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction data for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes: Manufacturing, 1956-1976, Catalogue 62-543 for the 1971=100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices

Indices des prix de vente dans l'industrie (1971=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueille des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: Industries manufacturières, 1956-1976, nº 62-543 au catalogue pour les indices basés sur l'année repère 1971=100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix

by oil companies for finely specified categories of sale. A listing of the components of the old and revised price samples is given in text table 1.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user category in the Petroleum Refinery Index (PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P^{Pub.}_{t/71} = P^{New}_{t/Jan.\ 77} \times P^{Old}_{Jan.\ 77/71}$$

where

$P^{Pub}_{t/71}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Thermal Coal Purchase Price Index (1971=100)

This index on a 1971=100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index

nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus. Les composantes de l'ancien échantillon et de l'échantillon révisé des prix figurent dans le texte tableau 1.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P^{publ.}_{t/71} = P^{nouv.}_{t/janv.\ 77} \times P^{anc.}_{janv.\ 77/71}$$

où

$P^{publ.}_{t/71}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation des prix mesurée à partir du nouvel échantillon;

$P^{nouv.}_{t/janv.\ 77}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P^{anc.}_{janv.\ 77/71}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice du prix d'achat du charbon thermique (1971=100)

Cet indice de base 1971=100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat

determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, excluding federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspeyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

$\sum$ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the fixed weight of a particular item in the base year o,

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, sans les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspeyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

$\sum$ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération fixe d'un article particulier pendant l'année de base o,

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend

is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971=100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) an index for bills less than 5 000 kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$Pt/_o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

$Pt/_o$ = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence qui doit paraître bientôt (nº 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971=100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie garantie, non susceptible d'être interrompue fait l'objet du relevé, les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité du produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$Pt/_o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

$Pt/_o$ = indice pour l'année "t"

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année "o", année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5 000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5 000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW and over 20 000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5 000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15 000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Méthodologie

Factures de moins de 5 000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5 000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW et plus de 20 000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5 000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinement que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15 000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977=100)

The Raw Materials Price Index is a base-weighted series covering the domestic disappearance of some 70 commodities originating in Canada or overseas. Price data, for the most part relating to unprocessed materials, are obtained from a variety of sources including existing Statistics Canada price indexes, other government departments, and trade publications as well as respondents. Where data does not exist for an unprocessed material a price is selected from the next highest stage of processing.

The weighting system is based on values calculated for the 1974 input/output tables, i.e., gross output plus imports, wholesale and transport margins minus exports. The 1974 values were subsequently adjusted for price change between that year and 1977 using appropriate series from the General Wholesale Price Index. Where individual quotations are used these are given equal weighting within a commodity series. Weights for the major groups are given below.

The formula used in the calculations is:

$$Ps = \frac{\sum \frac{pt}{p77} \times 100}{n}$$

$$Pm = \frac{\sum Ps \times V}{\sum V}$$

$$Pr = \frac{\sum Pm \times V}{\sum V}$$

where

p^t = current price of raw material

p^{77} = 1977 annual average price of raw material

Ps = commodity index

Indice des prix des matières brutes (1977=100)

L'indice des prix des matières brutes est un indice à pondération de base concernant la consommation intérieure de quelque 70 produits provenant du Canada ou de l'étranger. Les données sur les prix, la plupart se rapportant aux matières non transformées, ont été puisées dans diverses sources, notamment les indices de prix de Statistique Canada, les publications des ministères, les revues spécialisées et les enquêtés. Lorsqu'il n'existe aucune donnée sur une matière non transformée, le prix est établi à l'étape suivante de la transformation.

Le schéma de pondération est déterminé par les valeurs calculées dans les tableaux d'entrées-sorties de 1974, c'est-à-dire la production brute plus les importations, les marges des grossistes et celles des transporteurs, moins les exportations. Les valeurs de 1974 ont ensuite été corrigées pour tenir compte des variations de prix survenues entre 1974 et 1977, au moyen des séries appropriées de l'indice général des prix de gros. Chacun des prix particuliers pour un même produit reçoit une pondération égale. La pondération des groupes est donnée ci-après.

Voici la formule qui a servi aux calculs:

$$P_s = \frac{\sum \frac{pt}{p77} \times 100}{n}$$

$$P_m = \frac{\sum Ps \times V}{\sum V}$$

$$P_r = \frac{\sum Pm \times V}{\sum V}$$

où

p^t = le prix courant de la matière brute

p^{77} = le prix moyen de la matière brute en 1977

P_s = l'indice du produit

Pm = major group index

Pr = Raw Materials Price Index

V = Input/Output values in 1974 x $\frac{1977}{1974}$ GWI.

All important crude materials consumed in Canada are covered by this index without duplication. In some instances prices are volatile (non-ferrous metals) but others are controlled by marketing boards (milk), regulation (crude oil) or long-term contracts. At the total level the index should be an early indicator of price pressure of unprocessed goods flowing into Canadian manufacturing and distribution industries.

The following indexes are published monthly:

P_m = l'indice du groupe

P_r = indice des prix des matières brutes

V = valeurs des tableaux d'entrées-sorties de 1974 x IGPG $\frac{1977}{1974}$.

Cet indice prend en compte toutes les matières brutes importantes consommées au Canada, en évitant les doubles emplois. Certains prix fluctuent énormément (métaux non ferreux), alors que d'autres sont fixés par des offices de commercialisation (lait), des règlements (pétrole brut) ou des contrats à long terme. L'indice d'ensemble devrait être un indicateur avancé de l'évolution des prix des biens non transformés qu'utilisent les entreprises de fabrication et de distribution au Canada.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971=100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction data for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes: Manufacturing, 1956-1976, Catalogue 62-543 for the 1971=100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueille des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: Industries manufacturières, 1956-1976, nº 62-543 au catalogue pour les indices basés sur l'année repère 1971=100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix

by oil companies for finely specified categories of sale. A listing of the components of the old and revised price samples is given in text table 1.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user category in the Petroleum Refinery Index (PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P^{Pub.}_{t/71} = P^{New}_{t/Jan.\ 77} \times P^{Old}_{Jan.\ 77/71}$$

where

$P^{Pub}_{t/71}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P^{New}_{t/Jan.\ 77}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P^{Old}_{Jan.\ 77/71}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus. Les composantes de l'ancien échantillon et de l'échantillon révisé des prix figurent dans le texte tableau 1.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P^{publ.}_{t/71} = P^{nouv.}_{t/janv.\ 77} \times P^{anc.}_{janv.\ 77/71}$$

où

$P^{publ.}_{t/71}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation des prix mesurée à partir du nouvel échantillon;

$P^{nouv.}_{t/janv.\ 77}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P^{anc.}_{janv.\ 77/71}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Thermal Coal Purchase Price Index (1971=100)

This index on a 1971=100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice du prix d'achat du charbon thermique (1971=100)

Cet indice de base 1971=100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat

determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, excluding federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspeyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

$\sum$ is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the fixed weight of a particular item in the base year o,

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, sans les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspeyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

$\sum$ est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération fixe d'un article particulier pendant l'année de base o,

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend

is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971=100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) an index for bills less than 5 000 kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$Pt/_o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

$Pt/_o$ = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence qui doit paraître bientôt (nº 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971=100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie garantie, non susceptible d'être interrompue fait l'objet du relevé, les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité du produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$Pt/_o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

$Pt/_o$ = indice pour l'année "t"

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année "o", année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5 000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5 000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW and over 20 000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5 000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15 000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Méthodologie

Factures de moins de 5 000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5 000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW et plus de 20 000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5 000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinement que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15 000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Raw Materials Price Index (1977=100)

The Raw Materials Price Index is a base-weighted series covering the domestic disappearance of some 70 commodities originating in Canada or overseas. Price data, for the most part relating to unprocessed materials, are obtained from a variety of sources including existing Statistics Canada price indexes, other government departments, and trade publications as well as respondents. Where data does not exist for an unprocessed material a price is selected from the next highest stage of processing.

The weighting system is based on values calculated for the 1974 input/output tables, i.e., gross output plus imports, wholesale and transport margins minus exports. The 1974 values were subsequently adjusted for price change between that year and 1977 using appropriate series from the General Wholesale Price Index. Where individual quotations are used these are given equal weighting within a commodity series. Weights for the major groups are given below.

The formula used in the calculations is:

$$Ps = \frac{\sum \frac{pt}{p77} \times 100}{n}$$

$$Pm = \frac{\sum Ps \times V}{\sum V}$$

$$Pr = \frac{\sum Pm \times V}{\sum V}$$

where

p^t = current price of raw material

p^{77} = 1977 annual average price of raw material

Ps = commodity index

Indice des prix des matières brutes (1977=100)

L'indice des prix des matières brutes est un indice à pondération de base concernant la consommation intérieure de quelque 70 produits provenant du Canada ou de l'étranger. Les données sur les prix, la plupart se rapportant aux matières non transformées, ont été puisées dans diverses sources, notamment les indices de prix de Statistique Canada, les publications des ministères, les revues spécialisées et les enquêtés. Lorsqu'il n'existe aucune donnée sur une matière non transformée, le prix est établi à l'étape suivante de la transformation.

Le schéma de pondération est déterminé par les valeurs calculées dans les tableaux d'entrées-sorties de 1974, c'est-à-dire la production brute plus les importations, les marges des grossistes et celles des transporteurs, moins les exportations. Les valeurs de 1974 ont ensuite été corrigées pour tenir compte des variations de prix survenues entre 1974 et 1977, au moyen des séries appropriées de l'indice général des prix de gros. Chacun des prix particuliers pour un même produit reçoit une pondération égale. La pondération des groupes est donnée ci-après.

Voici la formule qui a servi aux calculs:

$$P_s = \frac{\sum \frac{pt}{p77} \times 100}{n}$$

$$P_m = \frac{\sum Ps \times V}{\sum V}$$

$$P_r = \frac{\sum Pm \times V}{\sum V}$$

où

p^t = le prix courant de la matière brute

p^{77} = le prix moyen de la matière brute en 1977

P_s = l'indice du produit

Pm = major group index

Pr = Raw Materials Price Index

V = Input/Output values in 1974 x $\frac{1977}{1974}$ GWI.

All important crude materials consumed in Canada are covered by this index without duplication. In some instances prices are volatile (non-ferrous metals) but others are controlled by marketing boards (milk), regulation (crude oil) or long-term contracts. At the total level the index should be an early indicator of price pressure of unprocessed goods flowing into Canadian manufacturing and distribution industries.

The following indexes are published monthly:

P_m = l'indice du groupe

P_r = indice des prix des matières brutes

V = valeurs des tableaux d'entrées-sorties de 1974 x IGPG $\frac{1977}{1974}$.

Cet indice prend en compte toutes les matières brutes importantes consommées au Canada, en évitant les doubles emplois. Certains prix fluctuent énormément (métaux non ferreux), alors que d'autres sont fixés par des offices de commercialisation (lait), des règlements (pétrole brut) ou des contrats à long terme. L'indice d'ensemble devrait être un indicateur avancé de l'évolution des prix des biens non transformés qu'utilisent les entreprises de fabrication et de distribution au Canada.

(1) Monthly prices are collected and processed three times per annum. With the release of the most current four-months indexes, indexes for the previous four-month span are revised and finalized. – Des prix mensuels sont relevés et calculés trois fois par année. Avec l'émission des indices les plus récents portant sur quatre mois, les indices pour la période de quatre mois précédents sont révisés et finalisés.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971=100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction data for the commodity being priced; sales and excise taxes are excluded.
